ARBITRAGE STOCK

About Company

Our team has been effectively operating in emerging markets since 2019. Over the years, we've developed hundreds of trading algorithms, the best of which we still use till today. We're not stopping on that. We're deploying cutting-edge technologies for our business growth. Some of such innovation includes our sophisticated solution designed by our mathematicians and programmers. We've been successfully testing it over the past year.

We are talking about the Arbitrage Stock trading robot which builds its forecasts based on artificial intelligence. Trading robots usually conduct algorithmic trading, where predefined trading criteria, such as time, trading volume, and price are all factored in.

But apart from these parameters, the Arbitrage Stock trading robot takes into account a complex set of factors that could influence market events. Such factors include global monetary situation, changes in the senior management team of companies and organizations, global politics, analysis of major social media sites, thematic forums, news outlets, financial and thematic private blogs

ARBITRAGE STOCK

Our Goals

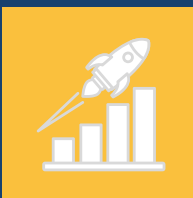

CRYPTO-MINING

Cryptocurrency mining is an extremely fast transactional validation process within a blockchain where community computing power is used to secure the network through specialized electronic equipment

ARBITRAGE

Arbitrage is a financial strategy that consists in taking advantage of the price difference between different markets on the same financial asset to obtain an economic benefit, usually without risk.

TRADING

Trading consists of the purchase and sale of assets such as stocks, futures, currencies or derivatives in a financial market.

ARBITRAGE STOCK

Deposit and Withdrawal

The deposit is made through Cryptocurrency. The withdrawal is also made via Cryptocurrency at the end of the investment circle. The investor can withdraw both the capital and the profits through a Cryptocurrency account/wallet. Reference bonds can be withdrawn immediately by the investor
